206 E. Rodriguez St. Brgy. Damayang Lagi Quezon City

ABOUT ME

I'm a Computer Science student and a freelance developer with experience in full-stack, mobile app, and systems development. I implemented the frontend and database of a web app that analyzes skin images to flag patterns consistent with psoriasis (research prototype – not for clinical diagnosis) and built the client for a mobile app that recognizes Filipino Sign Language (FSL) in real time. I'm excited to bring my skills and experience to a collaborative development team.

TECHNICAL SKILLS

- C++ (Game Engine Development)
- Javascript (React, React Native, NodeJS)
- Kotlin
- Python
- Dart
- Flutter
- Rust
- SQL

SOFT SKILLS

- Problem-solving and logical reasoning skills
- Strong willingness to learn new technologies and concepts
- Time Management
- Discipline
- Ability to focus
- Teamwork & Collaboration
- Effective Communication

WORK EXPERIENCE

Filipino Sign Language Recognizer App   April 13 - Present

Mobile App Developer
- Worked on tools like Android Studio and Kotlin to produce a mobile application
- Integrated MediaPipe's Gesture Recognition solution
- Managed Project Development using Jira and the Scrum framework

Psoriasis Analyzer Web App   March 30 - September 02

Full-stack Developer
- Used tools like React and NextJS to develop a website for detecting skin diseases using AI
- Designed responsive pages

EDUCATION

Bachelor of Science in Computer Science   2019 - Present
CIIT College of Arts and Technology
